IN THE SPECIFICATION

Please amend and enter the DETAILED DESCRIPTION by inserting the following paragraph immediately after the heading "Detailed Description."

B, Figure 1 shows a longitudinal section of a device for administering an injectable product, for example insulin, while the product is being administered. The device is formed by an injection pen, such as is known to the person skilled in the art. Of the device, only a casing 1, a product reservoir 2 and a dispensing means 3 are shown. The product reservoir 2 is formed by a conventional ampoule comprising a piston accommodated in it. The ampoule is inserted in a receptacle of the casing 1 in a known way. The dispensing means is formed as a conventional injection needle which is connected to the product reservoir 2 in a way known in its own right, and which protrudes straight from the casing 1 at a proximal end.
